

Tarea: demostrar la distorsion perceptual del area -- Lima vs. Pucallpa, asistentes_2025

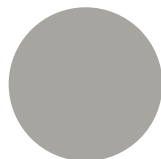

Diametro $\propto$ valor (INCORRECTO)

razon diametros = $r = 3.43x$

razon AREAS = $r^2 = 11.76x$ (lo que el ojo integra)

Lima
462,690

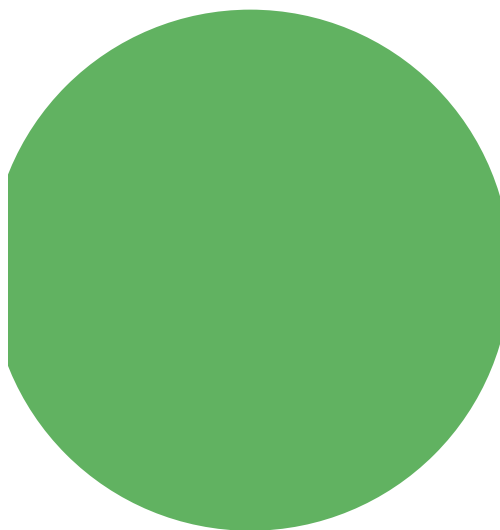

Pucallpa
134,905

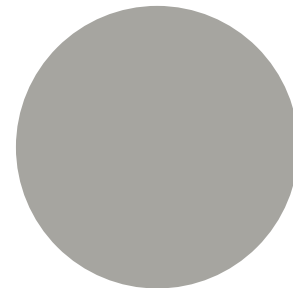

Area $\propto$ valor (CORREGIDO)

razon diametros = $\sqrt{r} = 1.85x$

razon AREAS = $r = 3.43x$ (coincide con el dato real)

Lima
462,690

Pucallpa
134,905

sobre-representacion visual extra = $r^2/r = 3.43x$ (= r)

diametro $\propto \sqrt{\text{valor}}$ $\Rightarrow$ area = razon real de asistentes
